

## CASE STUDY - PROJECT: Gherkin Restaurant

**SPACE**  
Architectural Interiors

The Gherkin is one of the most iconic buildings on the London landscape.

### ▲ BENIF Interior Film selected for the Gherkin restaurant refurbishment.

The restaurant and bar situated on the 39<sup>th</sup> & 40<sup>th</sup> floors features panoramic views and an amazing helix atrium from which the restaurant takes its name.

The restaurant and bar operated by **Searcys** was originally for members only, however after a recent refurbishment, it is now open to the public.

As part of the refurbishment project, **LX BENIF Zinc Effect** interior film, supplied by leading surface material distributor **spAce Architectural Interiors**, was selected to re-cover tables, bar areas and lift interiors.

Specialist contractors **T6** were able to carry out the work in only four nights in time for the official opening to the public.

Manufactured by **LX Hausys**, **BENIF Interior Films** are self-adhesive architectural films that can be quickly and easily applied to almost any interior surface.

The results of the refurbishment were both visually pleasing, cost effective and practical thanks to **LX BENIF Interior Films** low maintenance requirements and longevity of performance.

With over 470 **LX BENIF** designs and finishes to choose from, walls, doors, paneling, skirting and architrave can be quickly transformed without the need for costly replacements.

**LX BENIF Interior Film** is CE and IMO Certified so can be specified with confidence for a wide range of applications.

▲ Specialist contractor T6 carried out the work over four nights.

▲ LX Hausys BENIF Zinc Effect interior film was used for this refurbishment, the results were visually pleasing and cost effective.
